

Deliverable 2

Resource to use

1. **I used information from these websites article and videos to complete my project:**

<https://www.youtube.com/watch?v=x5MhydiJWmc>.

robertalberto.com/linuxcommands/home.html.

https://linuxhint.com/ubuntu_20-04_google_chrome_installation_guide/.

<https://linuxconfig.org/how-to-install-libreoffice-ubuntu-20-04-focal-fossa-desktop>.

2. **I learned how to use Virtual machine, particularly the Oracle VirtualBox machine. I have learned how to setup everything for virtualization.**
3. **As I create a virtual machine, there was no need of any hardware except mt laptop. I used the ubuntu ISO file located in my local disk to install it.**
4. **As I am doing the default project, there was not any difficulties because I already did the setup few times before. I cannot remember every problem from back then, but one of them was making the VM fullscreen which was not working for me. After several tries and getting help, I was able to fix that problem by installing the guest addition image using terminal command.**
